

Resource Organisation Process

The goal of tagging

We are NOT trying to “level” texts.

We are trying to answer:

“What makes this text hard—and for whom?”

That’s why we tag across **three separate dimensions**:

- **D**ecoding demand
- **L**anguage demand
- **K**nowledge demand

Using a 3-point scale

Refer to the demand scale for each skill. This is not saying a text is ranked as low, medium or high, the scale references the demand on the skill within the text.

- **Low (L)**
- **Medium (M)**
- **High (H)**

So, every text ends up with something like:

D: **M** | L: **H** | K: **M**

Below is a definition of each skill demand and how to make a judgement of the text you are organising:

Decoding Demand (D)

This aligns most closely with DIBELS data.

What you look for:

Low (L):

- Mostly one- and two-syllable words
- High-frequency words
- Simple spelling patterns (CVC, CVCC, etc.)

Medium (M)

- Some multisyllabic words
- Common prefixes/suffixes (un-, re-, -ed, -ing)
- Occasional tricky spellings

High (H)

- Many multisyllabic words
- Greek/Latin roots (bio-, geo-, -ology)
- Irregular spellings
- Domain-specific terminology

Quick test:

- Can a student decode most words automatically? (L)
- Do they need to chunk words? (M)
- Are words likely to break them down? (H)

Language Demand (L)

This aligns strongly with CUBED NLM.

What you look for:

Low (L):

- Short, simple sentences
- Familiar vocabulary
- Literal meaning

Medium (M)

- Some complex sentences
- Tier 2 vocabulary
- Some inference required

High (H)

- Long, complex sentences (subordinate clauses, passive voice)
- Dense Tier 2 and Tier 3 vocabulary
- Abstract ideas
- Heavy inference required

Knowledge Demand (K)

What you look for:

Low (L):

- Everyday experiences
- Familiar topics
- No background knowledge needed

Medium (M)

- Some new concepts
- Can be understood with brief explanation

High (H)

- Unfamiliar topics (e.g. ancient civilisations, scientific processes)
- Requires prior knowledge or heavy front-loading
- Concepts build on each other

Important Note: Lexile score is only used to give teacher insight into text complexity when D/L/K are not able to be differentiated (this can help with suitability to age/complexity/themes)

When completing the below text dimension indicator:

- All texts to be **typed only**
- One colour per dimension to remain in table to identify each dimension
- Lexile score to be included if known (refer to above information regarding use in system)- Lexile scores can be found by searching title and author online.
- Once completed, update on the P-2 or 3-6 Master Book List and print off and add to the book box.

Text Title:			
Dimension:	L	M	H
D (Decoding):			
L (Language):			
K (Knowledge):
